December 4th, 12 to 1pm PST

Critical Science: Decolonizing Science Education with Bilingual Students and Teachers

It is no secret that for centuries education in the United States has centered the White, heteronormative, male student. Given the changing demographics of the US, and our current K-8 student population, there are ways to center traditionally underserved students to interrupt the perpetuation of oppressive systems within the institution of schooling. This talk will focus on ways K-8 multilingual students in bilingual school settings are the focus in bilingual teacher's lessons, as they relate to science teaching and learning, by focusing on critical science and decolonizing content and pedagogies.
